

Study feasibility checklist

Will the research requirements balance with the demands of the clinical workload in your organisation?

<u>Research Requirement</u>	<u>Project requirement</u>	<u>Comments</u>	<u>Actions</u>
Are staff who would be involved in the study appropriately trained in relation to study tasks? Have staff been GCP trained?			
Do you have the correct patient base?			
Estimated maximum number of patients to be recruited?			
Are there sufficient patients currently being cared for to achieve the expected patient recruitment by your organisation? Consider that perhaps 60-70% of 'appropriate' patients may be eligible and perhaps 30-50% of these will consent to participate			
Are there any other studies running in your organisation that could impact on recruitment?/clash with other studies			
Does the study involve extra staff time and is this manageable within the organisation?			
Has this extra staff time been costed?			
Does the study involve extra patient and staff transport/travel?			
Does the study involve extra appointments or tests for patients or carers?			
Are there additional medication costs?			
Have stationary/office costs been considered and calculated as acceptable to the organisation?			
Is there sufficient and appropriate space to facilitate the research?			
Is it a Commercial or Non-commercial study?			
Start and end dates of study
